STUDENTS

Health Procedures to be Used in Cleaning Instructional Equipment

The following health procedures shall be used in cleaning of musical instruments, Cardiopulmonary Resuscitation (CPR), mannequins, and instructional areas.

I. Brass musical instruments shall be cleaned using a sterilizing solution through the lead pipes as deemed appropriate by the music instructor. All brass instruments shall be emptied of condensation through water keys and slides after each use. Woodwind instruments shall be swabbed by the student after every use. The number of students assigned to using the same wind instrument in the band room shall be kept to a minimum, and under no circumstances should students ever share a mouthpiece.

II. CPR mannequins shall be disinfected with 10 percent bleach solution or isopropyl alcohol wipes between uses. Disposable masks shall be purchased for placement over the mouth of the mannequin.

III. Vinyl gloves shall be provided in first aid kits and used by personnel as needed.

IV. Disinfectant detergent approved by the Environmental Protection Agency (EPA) and the School Division shall be used for cleaning counters and other surfaces.

The Associate Superintendent for Student and Professional Learning (or designee) is responsible for implementing and monitoring this regulation.

This regulation and related policy shall be reviewed at least every five years and revised as needed.
